**Subject:** finally

hello,

maybe now you guys can stop making the new software cost more....  
xp is more than the last OS cost, but you people say your protecting the  
consumers. SO PROTECT ME NOT THE BUSINESSES....

the only thing you and the 19 states want is money. STOP now... the last  
thing we need is a government OS.

there is no better browser than IE. there is no better office program. the  
worst thing is you probably use and depend on the software you battle. there  
is no better OS. you have nothing but the bitter jealousy of companies like  
SUN who cant make it on their own because their products suck....

I dare you to respond to this email, you know this is all politics and money  
and no interest in the "consumer"... what a waste of years of college for  
the lawyers to waste their time in this supposed "free market amercia".

when you keep going on with this, you will drag the markets down too. if i  
was bill gates, i would trap you in red tape until the next administration  
comes. maybe we could have a real attorney general that actually understands  
freedom of capitalism past what his bureaucracy thinks it is.
